

# COMMUNITY CONSULTATION MAIL OUTS AND CORRESPONDENCE

## **MEDIA RELEASE**

**City of Wagga Wagga**

Telephone: 1300 2WAGGA

Facsimile: (02) 6926 9109

9 November 2009

### **Wagga Wagga Major Overland Flood Study**

Wagga Wagga City Council is gathering evidence related to what isolated flooding occurs after major rainfall events as part of the Wagga Wagga Major Overland Flood Study.

Council has commissioned WMAwater, Water and Environmental Engineers to undertake the study.

The study, funded by Council and the NSW Department of Environment, Climate Change and Water, aims to examine flooding resulting from major overland flows that drain through the urban areas of Wagga.

"This flood study is being undertaken to help Council examine what localised flooding occurs after large volumes of rain," said Terry Dodds, Director Infrastructure Services Wagga Wagga City Council.

"Council are keen to engage with members of the community who may have valuable information such as photos of flooded stormwater drains or overflowing gutters, knowledge of the extent of flooding in their local area, depth estimates of the flood waters and dates when the flooding occurred."

"All the information will then be used to create computer modelling to help design against future flood hazards and flows," he added.

Council intends to use the results of the study to:

- Examine flood mitigation and management measures, in a Floodplain Risk Management Study, to address the flood problem;
- Address the flood risk for Development Applications in flood liable areas;
- Ensure future land release is zoned correctly;
- Determine and address the flood hazard in flood liable areas; and
- To define properties on Section 149 planning certificate to ensure the property is subject to flood related development controls.

Anybody with information or photographs can contact Council Officer Brad Jeffrey on 1300 292442 or email [jeffrey.brad@wagga.nsw.gov.au](mailto:jeffrey.brad@wagga.nsw.gov.au), or WMAwater's Steve Gray on 9299 2855 or email [gray@wmawater.com.au](mailto:gray@wmawater.com.au).

---

For further information, please contact Brett Koschel on 69 269 264 or 0429 397 603.

## Wagga Wagga Major Overland Flow Study – Questionnaire January 2010

Council is seeking the community's input in providing historical data for an overland flow study for Wagga, and has engaged WMAwater to accurately define the nature and extent of this flooding. That is, the study focuses on local flooding and drainage rather than river flooding. This will provide a sound basis for addressing flood and drainage problem areas and for flood management/drainage planning of the catchment. If you have any such flood photographs or information on flood levels in your area, it would be greatly appreciated if you could provide them to Council's Consultant in the following ways. You can mail any photographs and/or the completed questionnaire (preferably by 20<sup>th</sup> February, 2010) using the **prepaid self-addressed envelope provided**, or fax to 9262 6208, or scan and email to [gray@wmawater.com.au](mailto:gray@wmawater.com.au). Council thanks you for your assistance in this study.

We moved to this address in 1981 when there were no houses behind us in what is now Springvale.

During the period to about 1995 and despite some periods of very heavy rainfall the Springvale drain never overflowed its banks and there was no significant surface runoff across our property.

However in about 1995-1996 and after a period of very heavy rainfall in the catchment water flowed through our paddock. Again, in about 2005-2006, following heavy rainfall the same thing happened – probably with a greater quantity of water. Neither of these events resulted in water entering the house or other buildings.

**Where did the water/flooding come from?**

1. Urban development during the past 25 years in the area between Plumpton Road and Mangoplah Road has greatly increased both the volume and the speed of runoff.
2. As a consequence the volume of water in the Springvale drain has increased greatly causing it to overflow its banks.
3. Similarly, water flows down surface drains in Hakea Place to the Eastern end of Hakea Place and then a small surface drain goes south to flow into the Springvale drain. However to enter the Springvale drain this water must force a swing trap door to open. As the Springvale drain is already full of water this trap door cannot open against the force of water already in the drain and so the water in the smaller drain has nowhere else to go except to flow east with the gradient across our paddock.
4. When the Springvale drain is flowing with a full volume of water, the two pipe culvert under Plumpton Road is inadequate for the volume of water to flow through and causes the water to back up on the Western side of the culvert.
5. Maintenance work and improvements on the Springvale drain and the associated drainage infrastructure has, in our view, been inadequate over the past twenty nine years.

To summarise we believe that it is reasonable to say that the design of the Springvale drain and the associated drainage infrastructure did not adequately take into account the urban developments that have occurred in the area.

## Wagga Wagga Major Overland Flow Study – Questionnaire January 2010

Council is seeking the community's input in providing historical data for an overland flow study for Wagga, and has engaged WMAwater to accurately define the nature and extent of this flooding. That is, the study focuses on local flooding and drainage rather than river flooding. This will provide a sound basis for addressing flood and drainage problem areas and for flood management/drainage planning of the catchment. If you have any such flood photographs or information on flood levels in your area, it would be greatly appreciated if you could provide them to Council's consultants in the following ways. You can mail any photographs and/or the completed questionnaire (preferably by 2nd February, 2010) using the **prepaid self-addressed envelope provided**, or fax to 9262 6208, or scan and email to [gray@wmawater.com.au](mailto:gray@wmawater.com.au). Council thanks you for your assistance in this study.
